

Material Hub – Your open pathway to the world of materials

Searchers

- save time by utilizing a centralized, unified materials research tool
- easy contact to experts from science and industry
- influence features of our tools by your feedback

Data providers

- increase visibility and impact
- enlarge customer base
- present and advertise your own materials or research results
- make self-developed materials known
- initiate research and industry cooperations

Benefit

Intuitive research interface

- unified access to material data from heterogeneous sources
- linked research and industry data
- contact the experts directly
- intuitive search interface
- semantic data enrichment
- different research strategies: by material properties, use cases and relevant standards;
- similarity search
- material comparison
- free of charge
- no registration required

Find

Publish

Material Hub is an open and central materials research platform.

It enables researchers, engineers as well as artists and craftsmen to find materials, semi-finished products, intermediate goods and related expertise, thus strengthening the network between industry and research.

Material Hub covers all material classes and combines data from science and industry.

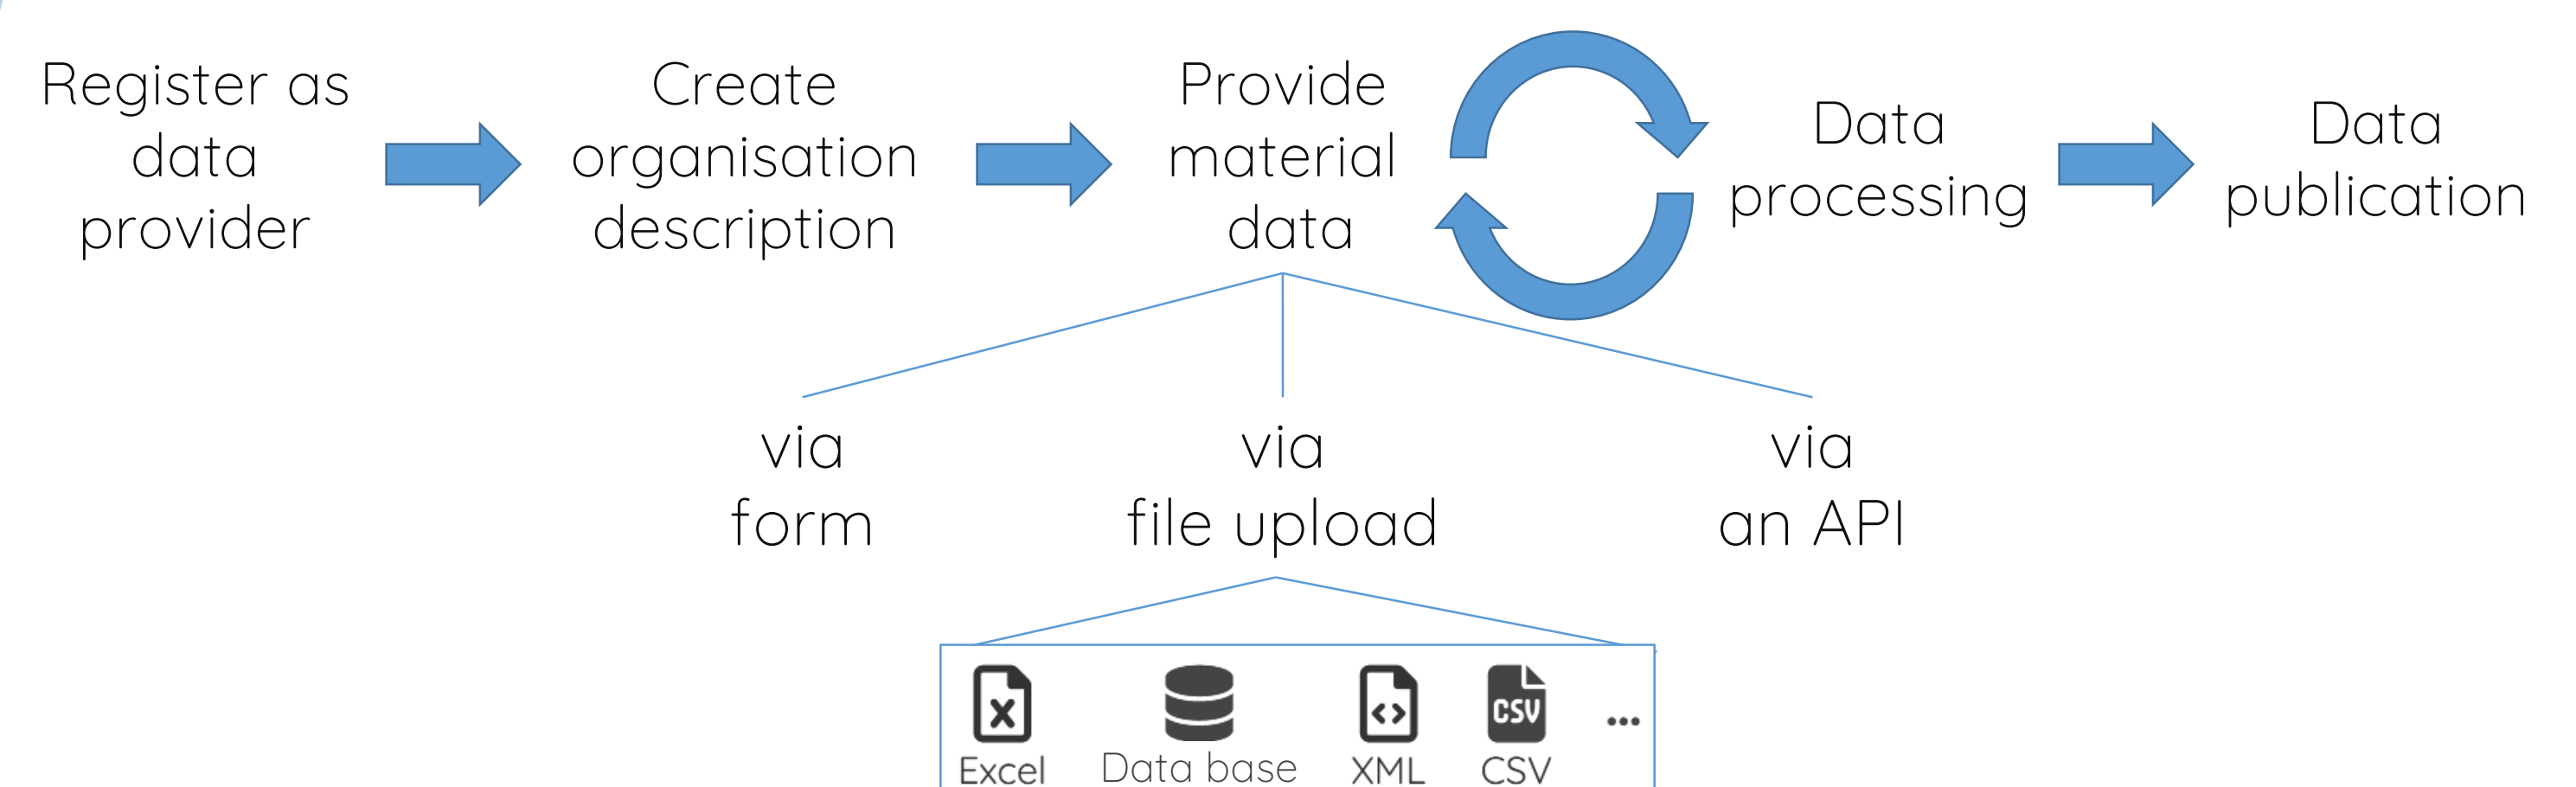

Material Hub is developed at the SLUB Dresden and is now part of the FID Materials Science

Publish your material data

- present your organization
- publish properties of new and existing materials
- supplement existing materials
- quality-assured publication in dialog with the Material Hub team
- free of charge
- easy registration
